

Unsounded

Opensource Installation network

Manual

Unsounded is the name of this open-source easy-to-make device. It is also the collective created by many of these apparatuses. Each unsounded machine is a knot of a sonic web. Sound portals are opened in the area once in a while, subtly, by the installations. Download the component list and build your unsounded devices. Put them into your community and create a larger network together. Visit the project website for more info.
